

TiVo MG2

The TiVo MG2 Video Gateway is the next step in the evolution of home TV viewing.

The TiVo MG2 is a dramatic improvement over existing set-tops – it has full 4Kp60 output, supports HDR10 programming, and runs the intuitive TiVo user experience.

It is a media hub which means it connects to other client set-tops (Qi3), and distributes and shares video content throughout the home.

With its **6 tuners**, you can record or watch multiple channels at the same time in different rooms.

It comes with a **1 TB hard drive**, so you can record and store just about all the video you'll ever want.

1 TB hard drive will store approximately 500 hours of HD video!

Improved Watch-and-Record Capabilities Consumers value the watch-and-record flexibility they get with the TiVo MG2 Video Gateway.

It comes with an integrated MoCA® 2.0 home networking interface, which allows it to serve as a high-speed multimedia hub via existing coaxial cables in walls for sharing content with other compatible devices in the home, creating an IP home network without having to install new wiring.

This delivers whole home networking for service like Multi-Room DVR.

With a Multi Room DVR you can record or pause, fast-forward or replay the shows you are watching on any TV in your home.
